## Oxygen Sensor Tester

Art No. 51.1300

*This inexpensive tool quickly and easily tests oxygen sensors*

The oxygen sensor senses the amount of oxygen in the exhaust after combustion. It then produces a voltage of 0 to 1 volt. If the amount of oxygen in the exhaust is high the oxygen sensor will produce a low voltage (below 450 millivolts). If the amount of oxygen in the exhaust is low the sensor will produce a high voltage (above 450 millivolts). The Scan-Tech oxygen sensor tester easily tests the voltage output from the oxygen sensor. An LED lights when the sensor produces a high voltage and goes off when the sensor falls below a low voltage. This tester can make testing an oxygen sensor simple.

Scan-Tech's Oxygen Sensor Tester features:

- On-Off Switch
- LED light that indicates if sensor's output voltage is OK
- Easy-to-follow instructions
- Easy-to-use wire-piercing connector
- 1-year limited warranty

9-volt alkaline battery required

| <p>All earlier valves have been superseded by one part number, which has a heavier diaphragm inside. This as earlier versions had a softer diaphragm and could give the engine a "hooting" noise when the car decelerates. Whith this new valve you solve the problem.</p> |                 |            |            |           |   |   |
